Extended Service - Retro-link

Until now, it has not been viable to replace your existing Plate Heat Exchangers with new models or designs, due mainly to the extensive modifications that would be required to the current pipe work on site.

This is no longer an issue. AHTT are now able to offer a revolutionary system called “Retro-link”.

AHTT are able to achieve this via a customised manifold fabricated to match your existing pipe work. This manifold is an integral part of the Plate Heat Exchanger (not just a bolt on addition).

Standardise your units

By utilising the “Retro-link” system, customers will now be able to standardise their existing Plate Heat Exchangers on site. The major benefits of this system are:

- No down time to modify existing pipe work.
- The option to replace units (instead of replacing expensive and dated plate packs)
- Standardise units on site.
- One supplier for all Plate Heat Exchanger requirements.

Fitment

To ensure accurate fitment of the “Retro-link” system, one of our qualified Sales Engineers will visit your site at time of order placement, not only to measure your existing pipe work, but to locate any obstructions that may need to be taken into account during the construction of this “Retro-link” Plate Heat Exchanger

Delivery Times

Delivery times on “Retro-link” Plate Heat Exchangers are the same as those of a standard Plate Heat Exchanger. Should you require further details in regards to the “Retro-link” system or any of the other AHTT products or services, please feel free to contact us anytime.
