

Heat Transfer Engineering Solutions

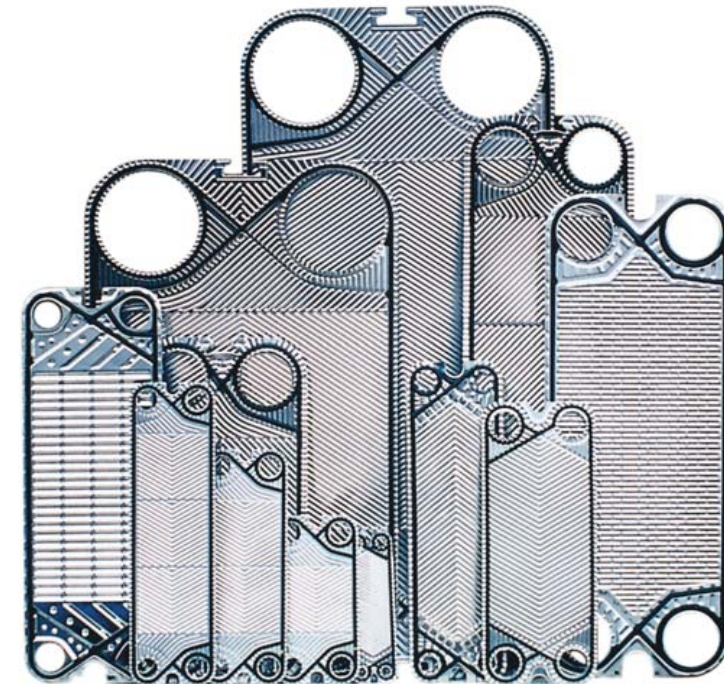

## Plate Heat Exchanger Systems

AHTT, an Australian Heat Exchanger Company with the aim of providing our customers with professional service, economical heat transfer solutions and equipment second to none in regards to performance, quality and price.

AHTT, through an extensive worldwide network of suppliers is able to provide a unique service to industry. With a single phone call your requested requirement for what ever type of heat exchanger type you require will begin the search.

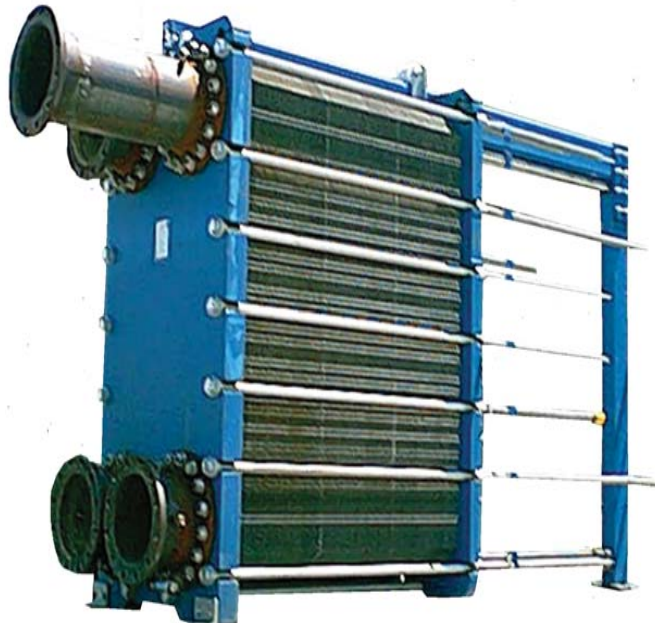

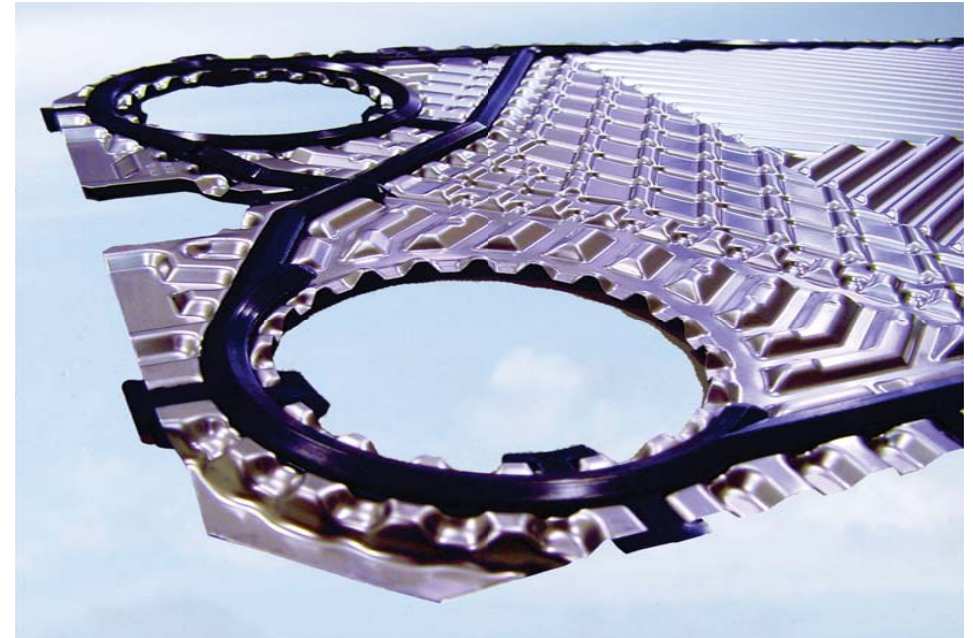

# Custom Designed Heat Exchangers

Heat Exchangers have been used since the very early days of the process industry for a range of heating and cooling duties associated with heat recovery, with the aim of maximizing process efficiency.

Plate heat exchangers consist of a series of corrugated plates with a peripheral gasket that are held within a steel frame. All liquid contact surfaces are manufactured in stainless steel that eliminates corrosion due to aggressive media. If stainless steel is unsuitable a range of options are available, including Titanium and Hastalloy.

Gaskets are selected for the specific application.

## Extended Service Plates & Gaskets

Being able to supply new Plate Heat Exchangers from AHTT's manufacturing partner's presses is only part of the service AHTT provide to industry. Together with new plates and gaskets, plate reconditioning is available.

AHTT are able to offer reconditioning of plates to suit more than 100 Plate Heat Exchanger types in use today including:

## Product Range

Plate Heat Exchangers  
Braze Heat Exchangers  
Plate & Shell Exchangers  
Energy Audits  
Shell & Tube Exchangers - Aztec Singapore  
Steam injectors - Hydro Thermal USA  
Desuperheaters - Doucette USA  
Process Filters - Bernoulli Sweden

## Spare Parts for

Plate Exchangers - Plates & Gaskets  
Steam injectors  
Desuperheaters  
Process Filters
